## Introduction of Sinogreenergy

# Operating as an Integrated Investment Platform

- Optimize the abundant solar resources in Taiwan and create values to key stakeholders:
  1. Generate clean energy for end-users
  2. Offer stable yields to investors
  3. Add rental income for landlords/ farmers
  4. Improve supply chain of solar PV sector
  5. Provide interest & fee incomes for banks
  6. Create employment opportunities for local communities

## Introduction of Sinogreenergy

# Project Achievements and Pipeline

### Roof-Top

- On-grid: 145.6 MW
- Under Construction & Developing (in the Process of Tai-Power Approval) : 15.5 MW
- Under Development : 26.8 MW
- Accumulated (Acc.) to 2019/E : 187.9 MW

### Ground-Mount

- On-grid: 3.8 MW
- Under Construction : 24.5 MW
- Under Development (2019/E) : 83 MW
- Acc. to 2019/E : 111 MW
- Acc. to 2020/E : 368 MW

## Introduction of Sinogreenergy

## Distribution of Rooftop Projects

Area	Project Site
Yunlin	187
Changhua	105
Tainan	90
Chiayi	79
Pintung	40
Hualien	25
Taitung	17
Kaohsiung	12
Taichung	11
Taoyuan	11
Hsinchu	9
Nantou	6
Taipei	6
Yilan	6
Miaoli	2
Keelung	1
New Taipei	1
<b>Total</b>	<b>608</b>

\* Including projects in operation & under construction

## Introduction of Sinogreenergy

## 2016~2019 Development of Ground-Mount Projects

Projects	Grid Approval (MW)	BOE Application (MW)
Yunlin Project 1	38.07	30.38 (3.81 COD)
Yunlin Project 2	99.84	36.92
Yunlin Project 3	219.80	74.45 (SubStation Land Ready)
Chiayi Salt Land	20.00	20.00
Changhua Tender	178.16	
Changhua Project	39.98	
Pintung Tender	50.00	50.00
Pintung Project	50 (Application)	50.00 (local Gov. Approval)
Type 3 Ground mount	4.53	4.53
<b>Total</b>	<b>700.38</b>	<b>266.26</b>

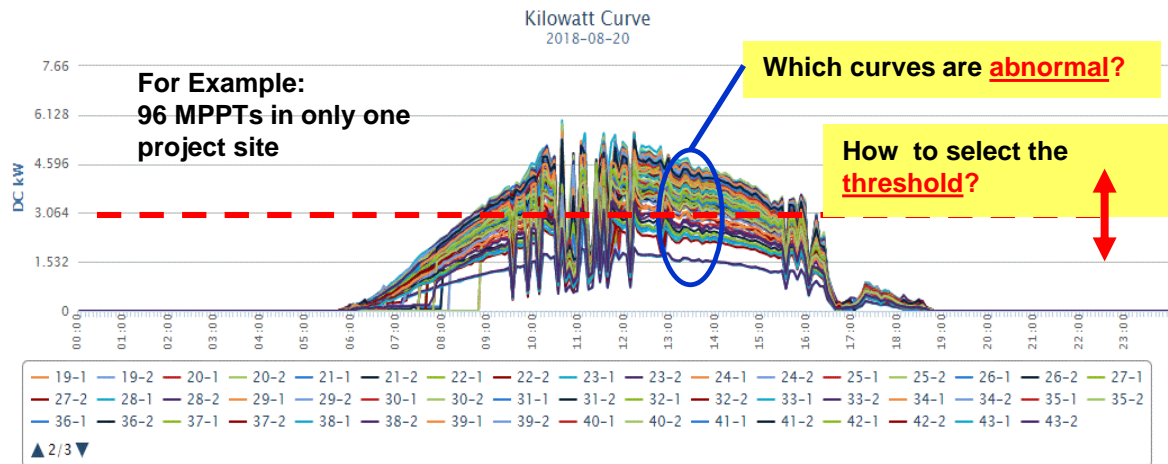

## Current O&M Situation

# Background & Motivation

# Monitoring System

- By manual review (Visual Inspection)?
- How about monitoring 500 projects?
- Automatic judgement? Threshold?
- What should be prepared before dispatching manpower to the field?

Model

## Power Prediction Engine

# Power Prediction Engine – Machine Learning

Only 7-day Learning  
for each Project Sits

Finger-Print is built  
by each power plant

In-situ analysis  
in every 5-min

No Specific Parameters  
to input

- Location / Sea-Level
- Inclination / Azimuth Angle
- PV Module  
(type/vendor/PAN file)
- Inverter (type/supplier)

## Algorithm

# Fault Detection

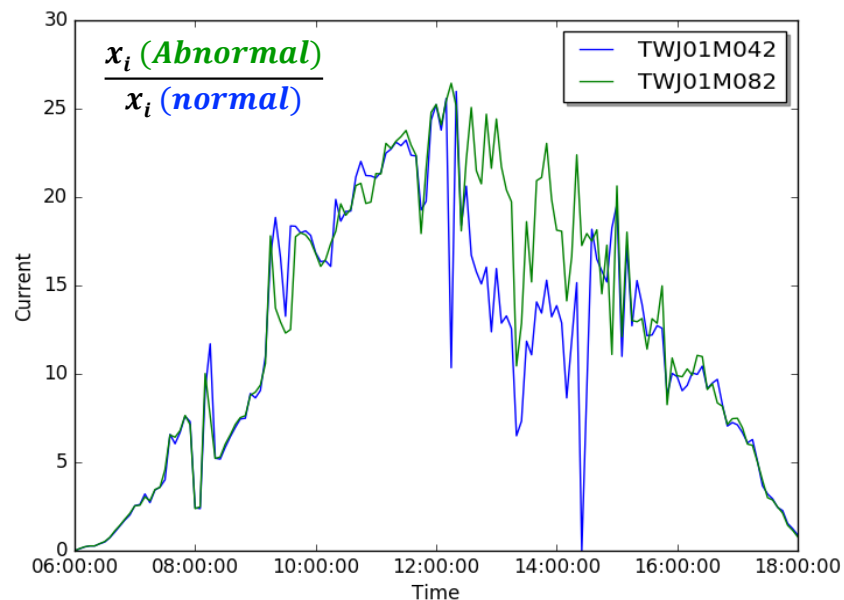

$$\text{Abnormal Ratio} = \sum_{i=1}^n \frac{x_i(\text{abnormal})}{x_i(\text{normal})} / T \quad (1)$$

$x_i(\text{abnormal})$ : feature value for low efficient equipment

$x_i(\text{normal})$ : feature value for normal equipment

$T$ : time frame period

# Manpower & Resource Management

Alert Reply Rate (within a week)

Owner	Project Number	Alert Number	Reply Number	Reply Rate (%)
A	22	14	14	100%
B	20	7	4	57%
C	18	4	4	100%
D	18	15	12	80%
E	18	4	3	75%
F	16	2	2	100%
G	13	55	37	67%
H	10	7	6	86%
I	8	13	10	77%
J	7	2	2	100%

Benefit

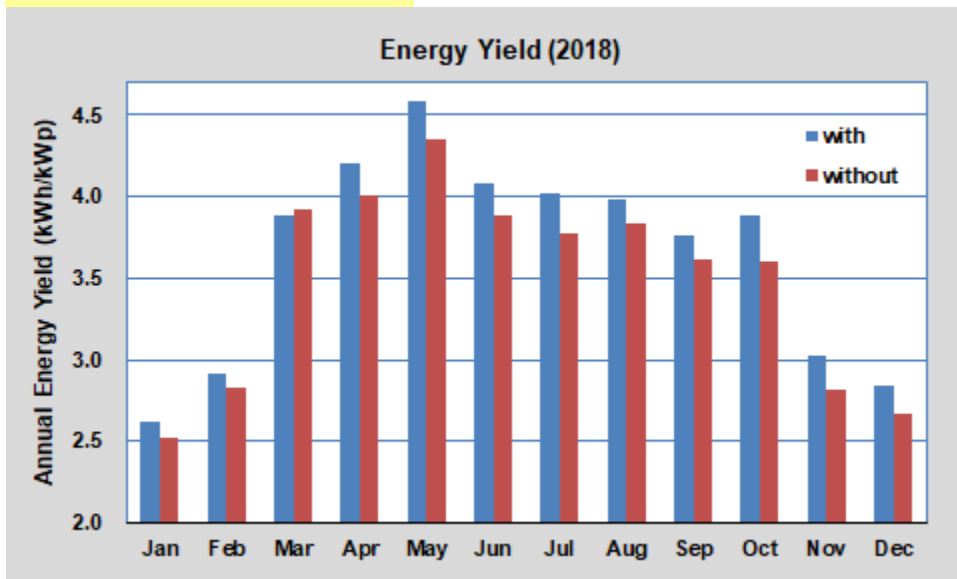

## Energy Yield Improvement

# Energy Yield Improvement

## 0.16 kWh/kWp (4.7%)

With: 3.65 (120 sites)

Without: 3.49 (120 sites)

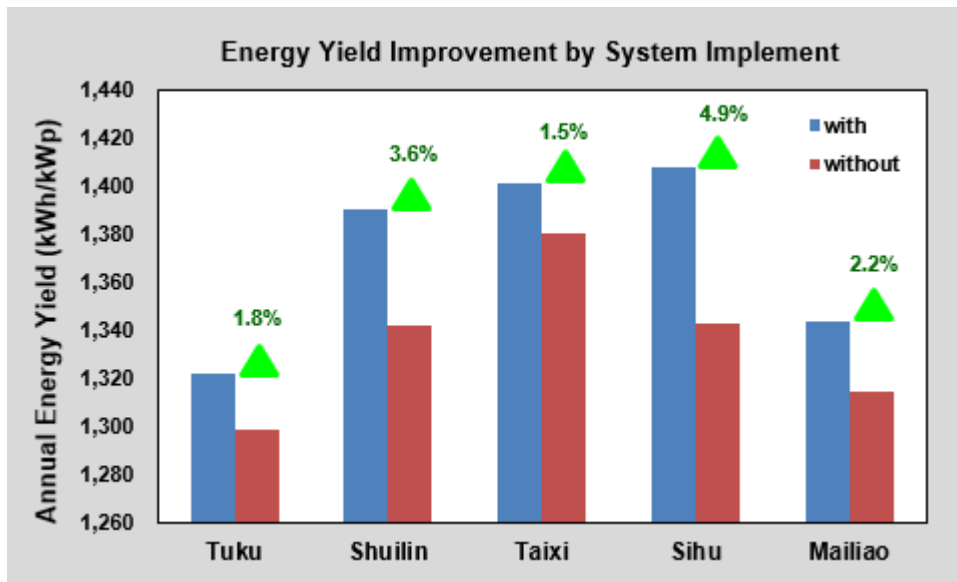

## Benefit

*Energy Yield Comparison in the same Geographic & Weather Condition*

# Energy Yield Improvement 1.8% ~ 4.9% (in Yunlin County)

## Achievement

# Publication in EU PVSEC 2019

## Oral Presentation (5BO.5.3)

23 highest scored abstracts (from 900 worldwide submitted abstracts) are invited to submit a paper for peer review in the scientific journal "Progress in Photovoltaics".
